

Contract Health Service Management Information System, V 3.1 Patch 6

EXECUTIVE SUMMARY

The Contract Health Services Management Information System (CHS/MIS) provides an effective and reliable means by which eligibility for paid health care is determined. Contract Health System (CHS) tracks, stores, and reports clinical and cost data on patient referrals to in-house clinics, other IHS facilities, and contract health providers.

Patch 6 contains 25 fixes and enhancements as recommended by the Contract Health Service Working Group. Some of these improvements include updated denial options and revised EOBR processing. This patch also allows negative payment adjustments for third party billings.
